

THESIS INTERNSHIP

R&I Genetics offers opportunity for under-graduate students in bioinformatics/biological sciences for thesis development within its research unit.

R&I Genetics is a clinical laboratory, located in Padova, operating in the field of genetic testing in rare diseases accredited within the Italian National Healthcare System (SSN).

The core activity of the laboratory is focused on NGS sequencing in tandem with other genetic testing technologies, i.e.: targeted NGS panel sequencing, whole exome sequencing (WES), whole genome sequencings (WGS), Sanger Sequencing, high density CGH array, Real Time PCR and fluorescent quantitative PCRs.

Applicants for the open position should be students in bioinformatics sciences or biological sciences looking for thesis internship in the field of bioinformatics applied to human genetics and will be operative within the bioinformatic unit.

Students will have the opportunity to learn NGS sequencing methodologies and advanced bioinformatics workflows applied to human genetics.

The candidate should be extremely motivated, have well-developed social skills and able to work in a team. Basic bioinformatics skills are mandatory.
